What Causes Does STDs Have On People ?

- Sexually transmitted infections can be caused by: Bacteria (gonorrhea, syphilis, chlamydia)
- Parasites (trichomonas)
- Viruses (human papillomavirus, genital herpes, HIV) intestinalis.
- Sexual activity plays a role in spreading many other infectious agents, although it's possible to be infected without sexual contact. Examples include the hepatitis A, B and C.

These are the their meaning

- ◆ **Human papillomavirus infection** ~ An infection that causes warts in various parts of the body, depending on the strain.
- ◆ **Genital Herpes** ~ A common sexually transmitted infection marked by genital pain and sores.
- ◆ **Chlamydia** ~ A common sexually transmitted infection that may not cause symptoms.
- ◆ **Gonorrhea** ~ A sexually transmitted bacterial infection that, if untreated, may cause infertility.
- ◆ **HIV / AIDS** ~ HIV causes AIDS and interferes with the body's ability to fight infections.
- ◆ **Syphilis** ~ A bacterial infection usually spread by sexual contact that starts as a painless sore.
